ARI STEVI-AS: Born to last

The new range of ARI STEVI AS is born, they are pneumatic piston valves for ON / Off service and are devised for more than 1 Million uninterrupted cycles and fully tight thanks to their quality and rugged design.

The special self adjusting stem design with V-loaded PTFE seals and double guided stem make this possible.

Thanks to an excellent Kvs factor by the optimal flow arrangement and larger stroke, energy savings of up to 31% can be achieved.

Other Unique features of the ARI STEVI AS are in example the bidirectional tightness without the need of non return valve, quick coupling pneumatic connections, standard position indicator, diverse plug sealing materials, 360° turning actuator... and so on.

They are excellent valves for process plant, mechanical industry and OEM. Valves can be made either in stainless steel or bronze and the actuator is made of High Density Polyamide. Service temperature range is up to 180°C and is provided with threaded ends, flanged ends or clamp connections. The large diversity of modular accessories provides these valves a high versatility.
