UNIVAL Bronze Valves in the shipbuilding sector.

The latest international project successfully accomplished by our Company within the UNIVAL range of Butterfly Valves consisted of an automation package of full bronze valves for the cooling sea water circuits to main engines room in a typical shipyard of Eastern China.

The valve main material of construction was Aluminum Bronze for body and disc and solid bronze bars for the valve shaft and bushing. The body seat was NBR featuring the optimal design for sea water application.

Valves were assembled with ELOMATIC (part of EMERSON Group) electric actuators with manual over ride and comprehensive of the communication protocol of the DCS.

As typically required in all supplies to the marine segment of customers, the diverse batches required a witness inspection by a Third Party (Classification Society). This inspection activity was carried out in our in house testing facilities before packing and dispatch to the yard.

COMEVAL is a leading Company specialised in the design and supply of valves and flow control products. The company has a rich experience and reference track in supplying valve packages to the Shipbuilding sector being bulk carriers, chemical carriers, asphalt carriers, LNG carriers, Oil carriers and also fish processing vessels.

The range of UNIVAL butterfly valves is comprehensive of a rich combination of materials of construction, designs and operation styles to suit a vast majority of HVAC, water works and Industrial applications encountered in the present market.
