## Your Valves coming to life

Control Valves, Safety Valves and Other critical components of added value are subject to cyclic wearing down and are worth to be maintained taking advantage of programmed plants shutdown.

Our service workshop personnel routinely carry out these works efficiently and economically, using genuine spare parts and the great expertise of the service personnel.

Most of the in-coming valves for reconditioning service usually feature seat leakage problems due to the disc wear, atmospheric leakages by stem packing wearing down, control misalignments caused by the positioner, bellow sealing systems by cycling wearing, union gaskets and other symptoms of similar nature.

These symptoms are dealt with in an efficient manner and are comprehensive of a final painting service to restore the valves as brand new.

Our service implements the guarantee restoration to the end user who is provided with the operating booklets and a new guarantee certificate.

Our workshop service is carried out exclusively on brands which are part of our portfolio of distributorship agreements.
